

State DOTs Pursue an Honorable Mission With Formidable Barriers

Access Sciences Helps You Rise to the Challenges.

State DOTs do much more than build and maintain transportation networks. Your greater mission is to connect communities, elevate our standards of living, and protect lives. Standing in the way are shrinking funds, rising demand, and critically outdated infrastructure. Access Sciences helps find solutions – through advanced, strategic information management.

Expertise Across Project Lifecycles

Information Strategy

We help you create a plan based on your specific objectives.

Technology, Governance & Change Management

We build the solutions to empower your people and organization.

Managed Services

We can implement the solution, so you can focus on your mission.

Information Has the Power to Unlock Funds

State DOTs have a multitude of records, unstructured data, and other bits of information. Access Sciences helps you organize these various elements into a powerful asset that can empower your organization. When your information is accurate, accessible, and properly managed, you're better able to comply with federal and state funding requirements and demonstrate that your programs are efficient and effective.

Proving Your Pilot Program

Pilot programs are where the future of transportation is imagined and initiated. But only the most successful programs secure the ongoing funding to bring those projects to life at scale. Access Sciences helps state DOTs create and maintain the detailed documentation systems you need to demonstrate pilot program effectiveness, navigate the complexities of state and federal funding sources, and justify the next phase of investment.

From Chaos, Clarity

Access Sciences helps you transform your chaotic unstructured content into a powerful asset that enables your people and drives your objectives. When you organize and use your information to its full potential, you can get clarity, gain control, shed risk, and seize opportunities.
